

Recommendation for this App (Probashi App)

At first I can see that this app is very easy to download and it take a very short time .Here I can see two options are available Bangla and English which is very easy for user. User can Sign in all kinds of way in this apps .On the home screen of those apps, I can see three thinks which Blogs, search and services are. I get a lot of services within the services field (Immigration consultancy service ,property Management service ,Digital Service, Legal Service, Trade Facilitation Service, Training Service, Medical Consultancy Service, Tourism Service ,Student Consultancy, Overseas job consultation. Overall, I will give some suggestion on this app :-

1. When I go to register Create Account Screen all required field any digit any character and symbol is taking there is no restriction .There is one that would be too harmful for security purpose .Other side even after giving an invalid email ID , an email message is supposed to be given ,but there is no message here.
2. User can sign Google and LinkedIn profile but cannot login Facebook it showing error massage, so it's best not to keep this field here.
3. When I want to login , the verification code comes sometimes and sometimes it doesn't and it takes a lot of time which is very annoying for the user.
4. When I give the Sign In wrong password , there are pop up massage show status code 400 what ordinary user won't understand it should be give an warning massage that password is wrong
5. Warning messages showing 400 status code everywhere in this apps and this cannot be understood by an ordinary user.
6. The home screen shows that the same list coming from data base of bloggers is coming up second time that maybe confused user
7. None of the fields in the services are working . Since the app is in the play store and it is being used by the user ,All the other field I things should be work.
